### CEO of Hitachi Zosen Corporation gave a PR presentation at the sponsors event of the Future Society Showcase Projects

～We will create “happy future” through our technology～

Hitachi Zosen Corporation participated in the announcement of sponsors of the Future Society Showcase Projects for Japan Association for the 2025 World Exposition (Expo 2025 Osaka, Kansai, Japan) held today in Tokyo, and the Company's President & Chief Executive Officer Sadao Mino expressed our thoughts on this project. The summary of the presentation is as follows.

Presentation by President and CEO Mino at the announcement

We are rolling out businesses based around Resource Circulation, Decarbonization, and Creating Safe and Prosperous Communities. Based on our corporate brand concept, “Taking on the challenge to create a world that lives in balance with nature through the power of technology,” we want to be a solutions partner that helps bring about a sustainable, peaceful, and secure society.

This project is being created jointly with the Expo Association and 11 companies and organizations. Carrying out this project jointly means we are looking forward to the “strengths of the collective,” such as more multifaceted solutions to problems, or new idea generation. We believe such joint and co-creative initiative will be important to accelerate our efforts for contributing to the SDGs, and to contribute to the creation of a sustainable society. Our exhibition concept for the future city is “In the world tree.” “The happiness of people will become the happiness of the Earth. The energy of people will become the energy of the Earth. And we will create this happy future through Hitachi Zosen's technology.” This is why we have set the "World Tree" as the base of the connection between people and the Earth. The exhibition allows visitors to experience a real sense of expectation for the future and an experience in line with the World Tree concept that connects the past and the present to the future.

The exhibition will represent the society of Society 5.0, where IoT, AI, resource recycling and decarbonization technologies are fused together, and will aim to give visitors the necessary awareness and insight into the environment and energy fields, and to embody our corporate message of 'harmony between humanity and nature' on a time scale of the future.
